This journal is printed on acid-free paper.

# Contents of Volume 133

## Number 1, January 1992

**Vanadia Supported on $TiO_2$–$SiO_2$ Mixed Oxide Gels: Structure of the Dispersed Phase and Activity for the Selective Catalytic Reduction of NO with $NH_3$**
Brent E. Handy, Alfons Baiker, Matthias Schraml-Marth, and Alexander Wokaun ..... 1

**Linear Free Energy Relationships in the Reduction of Imines over a Pd/Sepiolite Catalyst**
M. A. Aramendía, V. Borau, J. F. Gómez, C. Jiménez, and J. M. Marinas ... 21

**The Synthesis and Cracking Behavior of Zeolite-Amorphous Silica–Alumina Composites Prepared Using Gels with High Alumina and Low Organic Template Content**
Prasad Yarlagadda, Carl R. F. Lund, and Eli Ruckenstein ..... 28

**Aggregate Size Effects in $^{129}Xe$ NMR of Y-Type Zeolites**
Cathy Tway and Tom Apple ..... 42

**The Controlled Dispersion of Silica Supported $MoO_3$: The Role of Ammonia**
Abhay K. Datta, Jin-Wook Ha, and John R. Regalbuto ..... 55

**Isothermal Hydrogenation of Carbonaceous Adsorbed Species on an Iron Catalyst. III. Kinetic Model and Experimental Verification of the Variation of the Surface Hydrogen Concentration**
H. Ahlafi, C. O. Bennett, and D. Bianchi ..... 83

**Ni EXAFS Studies of the Ni–Mo–S Structure in Carbon-Supported and Alumina-Supported Ni–Mo Catalysts**
S. P. A. Louwers and R. Prins ..... 94

**A $^{57}Co$ Mössbauer Emission Spectrometric Study of Some Supported CoMo Hydrodesulfurization Catalysts**
J. A. Rob van Veen, Edo Gerkema, Adri M. van der Kraan, Piet A. J. M. Hendriks, and Henk Beens ..... 112

**The Effect of Modifying Alumina with Sulfate and Phosphate on the Catalytic Properties of $Mo/Al_2O_3$ in HDS Reaction**
Seo Il Kim and Seong Ihl Woo ..... 124

**Disproportionation Mechanism Study of Probing by *n*-Propylbenzene**
Tseng-Chang Tsai and Ikai Wang ..... 136

**Catalytic Functionalities of $WS_2/ZrO_2$**
K. Saiprasad Rao, H. Ramakrishna, and G. Murali Dhar ..... 146

**Oscillations during Carbon Monoxide Oxidation: A Monte Carlo Simulation**
D. Mukesh ..... 153

**Isomorphous Substitution of Iron Ions into Aluminophosphate Molecular Sieve, $AlPO_4$-5**
Jong Wook Park and Hakze Chon ..... 159

**Steady-State and Transient Kinetics of Displacement Adsorption and Educt Inhibition in Dehydration of Alcohols on Alumina**
Vladimír Morávek ..... 170

**Steady-State CO Oxidation Kinetics over the Pd(100) Single Crystal Surface and the *c*(2 × 2)-Sn/Pd(100) Bimetallic Surface Alloy**
A. David Logan and Mark T. Paffett ..... 179

**Characterization of Zeolite-Supported Pt–Cu Bimetallic Catalyst by Xenon-129 NMR and EXAFS**
D. H. Ahn, J. S. Lee, M. Nomura, W. M. H. Sachtler, G. Moretti, S. I. Woo, and R. Ryoo ..... 191

**Pretreatment Chemistry in the Preparation of Silica-Supported Pt, Ru, and Pt–Ru Catalysts: An *in Situ* UV Diffuse Reflectance Study**
Weiqing Zou and Richard D. Gonzalez ..... 202

**Reactions of Titanium Silicalite with Protic Molecules and Hydrogen Peroxide**
Giuseppe Bellussi, Angela Carati, Mario G. Clerici, Giuseppe Maddinelli, and Roberto Millini ..... 220

**Preparation and Characterization of Nickel–Aluminum Mixed Oxides Obtained by Thermal Decomposition of Hydrotalcite-Type Precursors**
O. Clause, B. Rebours, E. Merlen, F. Trifiró, and A. Vaccari ..... 231

**Ru/$SiO_2$-Impregnated and Sol-Gel-Prepared Catalysts: Synthesis, Characterization, and Catalytic Properties**
T. Lopez, P. Bosch, M. Asomoza, and R. Gomez ..... 247

*Note*

**Effectiveness of Biporous Catalysts for Zero-Order Reactions**
V. K. Jayaraman ..... 260

## Number 2, February 1992

**Aluminum Coordination and Lewis Acidity in Transition Aluminas**
F. R. Chen, J. G. Davis, and J. J. Fripiat ..... 263

**Isotopic Exchange between 2,2-Dimethylbutane and Deuterium on Rhodium/Silica Gel Catalysts**
Donald K. Takehara, John B. Butt, and Robert L. Burwell, Jr. ..... 279

**Isotopic Exchange between Alkanes and Deuterium on Rhodium/Silica Gel Catalysts**
Donald K. Takehara, John B. Butt, and Robert L. Burwell, Jr. ..... 294

**Physicochemical Properties of Ce-Containing Three-Way Catalysts and the Effect of Ce on Catalyst Activity**
John G. Nunan, Heinz J. Robota, Michelle J. Cohn, and Steven A. Bradley 309

**Mechanistic Studies on Direct Ethylene Glycol Synthesis from Carbon Monoxide and Hydrogen. 1. Homogeneous Rhodium Catalyst**
M. Ishino, M. Tamura, T. Deguchi, and S. Nakamura ..... 325

**Mechanistic Studies on Direct Ethylene Glycol Synthesis from Carbon Monoxide and Hydrogen. 2. Homogeneous Ruthenium Catalyst**
M. Ishino, M. Tamura, T. Deguchi, and S. Nakamura ..... 332

**Comparison of Pt/KL Catalysts Prepared by Ion Exchange or Incipient Wetness Impregnation**
D. J. Ostgard, L. Kustov, K. R. Poeppelmeier, and W. M. H. Sachtler ..... 342

**Kinetics of Ammonia Decomposition on Vanadium Nitride**
S. Ted Oyama ..... 358

**Hydrogen Effects on Nickel-Catalyzed Vapor-Phase Methanol Carbonylation**
K. Fujimoto, S. Bischoff, K. Omata, and H. Yagita ..... 370

**Reversible Reactions over Non-metallic Catalysts: A Transient Isotopic Tracing of the Isobutane–Isobutene–Hydrogen System over Chromia**
Juo-Yu Kao, Hélène Piet-Lahanier, Eric Walter, and John Happel ..... 383

**Surface Structure of Crystalline and Amorphous Chromia Catalysts for the Selective Catalytic Reduction of Nitric Oxide. I. Characterization by Temperature-Programmed Reaction and Desorption**
H. E. Curry-Hyde, Hans Musch, A. Baiker, M. Schraml-Marth, and A. Wokaun ..... 397

**Surface Structure of Crystalline and Amorphous Chromia Catalysts for the Selective Catalytic Reduction of Nitric Oxide. II. Diffuse Reflectance FTIR Study of Thermal Treatment and Oxygen Adsorption**
M. Schraml-Marth, A. Wokaun, H. E. Curry-Hyde, and A. Baiker ..... 415

**Surface Structure of Crystalline and Amorphous Chromia Catalysts for the Selective Catalytic Reduction of Nitric Oxide. III. Diffuse Reflectance FTIR Study of Ammonia Desorption from Brønsted and Lewis Acid Sites**
M. Schraml-Marth, A. Wokaun, H. E. Curry-Hyde, and A. Baiker ..... 431

**Catalytic Conversion of Alcohols. XXVIII. Product Selectivities for 2-Methylcyclohexanol Conversion with Metal Oxide Catalysts**
Hossein A. Dabbagh, Charlie G. Hughes, and Burtron H. Davis ..... 445

**A Reason for the Structure-Insensitive Catalytic Activity of Ni(100) and Ni(111) Surfaces for the Methanation Reaction of CO**
Hideki Hirano and Ken-ichi Tanaka ..... 461

**XPS–SIMS Study on the Surface Chemistry of Commercially Available Activated Carbons Used as Catalyst Supports**
P. Albers, K. Deller, B. M. Despeyroux, A. Schäfer, and K. Seibold ..... 467

**Catalytic Oxidation of Glyoxal to Glyoxylic Acid on Platinum Metals**
P. Gallezot, R. de Mésanstourne, Y. Christidis, G. Mattioda, and A. Schouteeten ..... 479

**Influence of Impregnation Parameters on the Axial Mo/$\gamma$-Alumina Profiles Studied Using a Novel Simple Technique**
M. A. Goula, Ch. Kordulis, and A. Lycourghiotis ..... 486

**Temperature-Programmed Sulfiding of Precursor Cobalt Oxide Genesis of Highly Active Sites on Sulfided Cobalt Catalyst for Hydrogenation and Isomerization**
Kazuhiro Inamura, Toshiyuki Takyu, Yasuaki Okamoto, Kozo Nagata, and Toshinobu Imanaka ..... 498

**Influence of Adsorbed $CH_3O$ on CO Desorption from $Ni/Al_2O_3$**
Raymond L. Flesner and John L. Falconer ..... 515

**On the Nature of the Active Sites for Ethylene Hydrogenation in Metal-Free Zeolites**
Junichi Kanai, Johan A. Martens, and Peter A. Jacobs ..... 527

***Book Review***

***Chemistry of Microporous Crystals.* Edited by T. Inui, S. Namba, and T. Tatsumi. *Studies in Surface Science and Catalysis,* Volume 60**
Jule A. Rabo ..... 544

**Author Index for Volume 133** ..... 545

## NOTICE

The Subject Index for Volume 133 will appear in the December 1992 issue as part of a cumulative index for the year 1992.

# INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

**Submission of Manuscripts.** Manuscripts should be sent by registered mail to either of the Editors:

Professor Gary L. Haller
Department of Chemical Engineering
P.O. Box 2159 Yale Station
Yale University
New Haven, Connecticut 06520

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Form of Manuscript.** Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in triplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 45 letters and spaces, and the name and complete mailing address (and telephone and fax numbers, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the *Journal of Catalysis* or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

*Notes* and *Letters to the Editor* may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

*Units* of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Systeme International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N $m^{-2}$." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry,* 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

*Footnotes* should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

*Tables* should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

*Figures* should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page (5.5 × 8 in.; column width, 2-5/8 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

*Electron micrographs.* Please supply three photographic copies of these so that the reviewers can inspect the fine details they contain.

*References* to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *Chemical Abstracts' Service Source Index*, 1985. Style and punctuation of references should be in accordance with the following examples:

1. Latef, A., Aissi, C. F., and Guelton, M., *J. Catal.* **119,** 368 (1989).
2. Louis, C., and Che, M., *in* "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

**Proofs.** Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

**Reprints.** Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

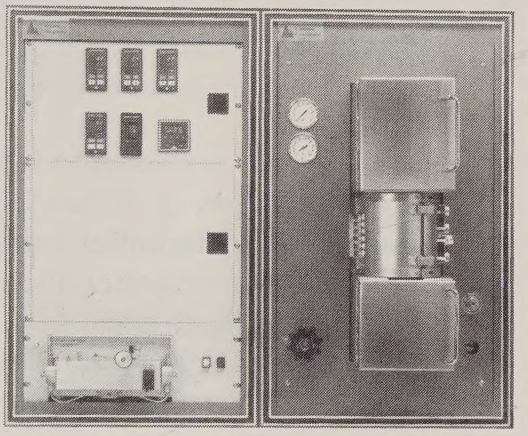
**Personal Computer Disks.** Manuscripts may be submitted to the *Journal of Catalysis* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Associate Director, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

# The AMI-2000... a reactor system designed by catalyst researchers for catalyst researchers

The AMI-2000 is the first reactor system designed specifically for catalyst research. It is the ideal system whether your work involves catalyst development, reaction kinetics, deactivation/ regeneration studies or related areas.



The AMI-2000 offers:

- standard & customized bench-scale systems
- modular design for easy component replacement or system expansion
- menu-driven software that enables you to write simple or complex experiments. The software also allows on-line experiment changes, experimental branching & real-time/historical trending.
- system interface with analytical instrumentation
- extensive safety features for unattended operation

At Altamira, we realize the importance of customer support. That is why the system purchase price includes a week-long installation and training session, followup service visits, user training courses, easy-to-understand operation and software manuals, quick reference instructions translated in major languages, and technical consultation services.

The AMI-2000 reflects the innovative spirit of Altamira Instruments, a firm founded by catalyst researchers dedicated to meeting your professional needs.

For more information contact: **Altamira Instruments**

2090 William Pitt Way, Pittsburgh, Pennsylvania 15238 USA • (412) 826-3080 • FAX: (412) 826-3081 • Telex: 5106019265

# Journal of Differential Equations

Editor-in-Chief

**Jack K. Hale**

*Georgia Institute of Technology, Atlanta*

This journal is concerned with the theory and the application of differential equations. The **Journal of Differential Equations** publishes articles addressed not only to mathematicians, but also to those engineers, physicists, and other scientists for whom differential equations are valuable research tools.

## Research Areas Include

- Mathematical control theory
- Ordinary differential equations
- Partial differential equations
- Related topics
- Stochastic differential equations
- Topological dynamics

Volumes 89–94 (1991), 12 issues
